TENTH YEAR

NUMBER 18

Prestonsburg, Floyd County, Kentucky,

Friday, June 12, 1936

\$1.50 PER YEAR

COMMITTEEMEN FOR SOIL CONSERVATION WORK ARE ELECTED

To Serve in Determining Benefits For Floyd Farmers in Conservation Program

130 FARMERS ENROLL

For the administration of the Soil Conservation program in this county, a committee representing the farm community has been elected for this year. The committee was elected in a meeting of farmers held at the office of County Agent S. L. Howell in the postoffice building here Friday.

Duties of these committeemen will be to appraise soil-building crop yields and thus determine soil-erosion permits to be made county farmer. In the interim, each farm entered in the program will be checked by the committeemen to ascertain the extent of soil-building work done. This done, the farmer may file his application for payment in accordance with the soil conservation program of the federal government.

The average to be paid per acre in Floyd county for participation in this program is \$7.00. County Agent S. L. Howell, who heads the program in this county, said last week. Approximately 130 farmers in Floyd have filed out work sheets which set out their intent as to joining the program. It is not too late to "sign up" now. Mr. Howell said that 100 farmers are urged to join in this work as soon as possible.

Fifty-one farmers attended Friday's meeting here. Names of committee members are: Chairman, Jim Lovell, of Community No. 1 (West end of the county); Jim Stephens, Milt Stanley, Sam K. Musick, Tom Adams.

Community No. 2 (East-end, John Crank, Fred and Maud Creek and the intervening section along the Big Sandy river); B. T. Frasure, S. G. Rice, W. B. Tackett, Chas. Ward.

Community No. 3 (Right and Left Sandy Creeks); E. C. Burnett, Don Fairchild, George Ester and Ballard Martin.

Community No. 4 (Middle Creek); James Hale, Jack Allen, Millard Hamilton, W. B. Howard.

FLOYD DEMOCRATS HOLD CONVENTION

Instruct for Roosevelt; Fail To Get Recognition in Convention at Louisville

Floyd county Democrats in their county convention here Saturday, went on record as unopposedly endorsing the administration of Franklin D. Roosevelt and pledged themselves as an organization to his support.

With but a single exception, however, they were divided through at the meeting. This exception came when W. S. Walton, Prestonsburg attorney, in an address advised the New Deal and declared that he was a Democrat but not a New Deal Democrat.

Harry Bass, chairman of the Floyd county Democratic committee, presided. Other speakers were: Claude P. Stephens, assistant United States District Attorney, Circuit Judge John W. Condit and F. M. Burke, Frankfort, former assistant Attorney General of the state.

At the start of the convention the Floyd county delegation failed to place a member as a delegate to the national convention or as a presidential elector.

R. V. May, of Louisville, spent the week-end here with Mrs. May and baby.

CREATED BY PRESIDENT—Mrs. Alfred Watt, of Canada, president of the Associated Country Women of the World, is greeted by President Roosevelt during the third Triennial Conference in Washington, D. C.

BOLDMAN GETS WHITEWASHING

AS PRESTONSBURG HURLED

PREMIERS GET TWO HITS—BULL CREEK LOSSES 5-3

Making his first start of the season on the mound, Adrian Collin held Boldman to two hits Sunday and shot the Blue cantons out of control and was nigger in a danger the famed 12 men.

Jack Tamm, Maywood, who didn't do so badly for Boldman, keeping the game close. One of the big well-remembered "singles" was by Boldman. He said that 100 farmers are urged to join in this work as soon as possible.

Prestonsburg plays at Drift Sunday and the Left Beaver boys were here on the following Sunday. Bull Creek Sunday lost its second game, this last loss being in Van Lear. The team here at Prestonsburg has improved materially within the past three weeks.

PARKER KILLED BY TRAIN NEAR HERE

Body of Prestonsburg Man, 28, Found Roadside—Early Thursday Morning

Body of Sam Parker, 28 years old, employe of the Mezell Supply Company here, was found beside the railroad tracks near the mouth of Town Branch, across the river from here, at 4 o'clock this Thursday morning. The top of his head was crushed and both legs were broken.

Several parties passed, going in both directions, during the night, and it is not known which of these struck him. It was last seen about 11 o'clock this morning. An inquest was conducted by Magistrate Jim Clark. The body still remains in the morgue.

Mr. Parker was well known in Prestonsburg, and had a host of friends. He is survived by his mother, Mrs. Martha High; two sisters, Mrs. Walter Daniels and Mrs. Bill Perry; and one brother, Ben Parker, all of the community; and by three half-brothers: Mrs. Jack Walton, Garrettsville; Mrs. George Adkins, Louisville; and Sally Hixson, Prestonsburg.

The body was prepared for burial by E. P. Arnold. Funeral arrangements had not been completed when this was written.

\$100,000 FOR WATER COMPANY TOO HIGH—CITY COUNCIL HOLDS

Offer of E. S. and E. M. Mayes, Springfield, Ky., to sell the Prestonsburg Water Company to the city of Prestonsburg for \$100,000 was turned down Saturday by the city council following a meeting of water company officials, council representatives and citizens at the Bank building.

The water company franchise expires in 10 years. It is understood.

USED FURNITURE CASH HARDWARE CO. Opposite Presbyterian Church

NYA YOUTHS LAUNCH CLEAN-UP PROGRAM

The boys working on the Prestonsburg NYA project have for the past four weeks carried out a clean-up program of great benefit to the town.

Working with the co-operation of Mayor A. C. Carter and M. V. Clark, are Mrs. Edith E. James, Senator county sanitation inspector, they Joe P. Tucker, Tom James, John H. county, and garbage of many years' accumulation from vacant and public lots. This is seen as a big step in preventing spread of disease.

In order to have them looking their best for Decoration Day, the community sludging with the view of leaving off the cleaning of public property the almost-gone ball-balls and cleaned the cemeteries. They lady which has been preferred in respect to work on the others soon.

HUNTER RE-ENTERS OFFICE SATURDAY

Restores Wright to Clerk's Position; Says Board Refused To Hire Teachers

Ballard Hunter on Saturday, June 6, re-entered the office of County Superintendent from which he was ousted by order of the county board of education February 8.

Mr. Hunter succeeded Palmer L. Fall as Superintendent following a ruling made by the Court of Appeals club and Rotary club of Pikeville, last week ousting Fall until Thursday and Friday of this week.

Mr. Hunter's return to the office of Superintendent Hunter Monday morning appointed Edgar L. Wright as clerk to succeed John Stephens, who succeeded Wright when Palmer Fall's entrance to office. Mr. Wright's salary was fixed at \$485 a month, as was that of his predecessor.

Superintendent Hunter said Saturday he nominated the Wayland school faculty also all recent teachers who had been heavily recommended by the sub-tribe trustees for teaching appointments but that the board of education refused to hire.

FLOYD COUNTY IS TO BE REPRESENTED AT FOLK SONG FESTIVAL

Floyd cantons who will take part in the American Folk Song Festival will be held Sunday at the cabin of the Works Progress Administration.

Major A. C. Carter and M. V. Clark, are Mrs. Edith E. James, Senator county, and garbage of many years' accumulation from vacant and public lots. This is seen as a big step in preventing spread of disease.

MARTIN-PIKE PIPE LINE TO BE LAID

Employment of Several Hundred Men in Four Counties Seen, Beginning Next Week

A pipe line extending from the county's main line to the county through Floyd and into the Martin county gas field is expected to be laid next month by the Marshall Natural Gas Company. It was said last week.

The line will be of eight-inch pipe and when it reaches this county it will be laid to a depth of 20 inches. The project is expected to create employment for several hundred men in the four counties through which the line passes.

Publicity Director Charles S. Emerson, who has opened a branch office in Pikeville, is being contacted by the officials of the Eastern Kentucky Automobile Club and highway officials will speak.

PLANS LAID FOR FLOYD WPA WORK AT MEETING HERE

Officials Make "Preferred List" of Projects To Be Undertaken This Year

350 NOW EMPLOYED

Representatives of Floyd county, the city of Prestonsburg, the county board of education and the Floyd county health department met with Works Progress Administration officials here Friday in making a joint effort to map out a WPA program in the county for this year.

E. H. Meredith, district WPA engineer, presided. He asked each county department to list in the order of preference the projects they deemed most important, and as a result, a comprehensive work program is seen for the next year in the county.

Arthur (Lambert) Dixon, WPA director, in a discussion of retro work and plans for the year indicated that there will be no material change in the program as a whole.

During the last year, the WPA has employed in the county by the WPA this year as during the past 12 months. Approximately 350 persons are employed on WPA projects at this time, he said.

UNCOMBESSED

By MARY HASTINGS BRADLEY

CHAPTER IX—Continued

"Anson wasn't there. Hiding out somewhere; reluctant to give testimony, I suppose."

"Get a cigarette?" he asked casually of Mitchell, and Mitchell offered him one. "I'm not smoking," he said.

"You dropped like a stone at Harriett's feet, and he stood there, his eyes checked out, looking blankly down at her."

CHAPTER X

Eventually every one quieted down. The sharp outbreak of protest dropped to more considering undertones at that phrase.

"I never felt lonelier in my life. I wanted one to talk to over with, and I hadn't anybody; Deck had vanished into the drawing-room and Mitchell, too, was nowhere to be seen."

"I could see the back of Deck's head; he was confronting Donahay over the table of notes. I saw Letty Van Alsty's brown head, tilted towards him, a little on one side."

"Well," murmured Donahay, "are you going on with this indefinitely? I'm telling you that I've got to be back on the job tomorrow."

CHAPTER XI

Anson was dead. Choked to death and thrust behind one of the officer's overcoats. Her pretty face was dark and terrible in congestion.

"I had reached Mitchell now. 'Oh, how do you feel?' he asked me for a cigarette this morning."

"You sound like a man who's making his wife miserable with your importunities. Ee-treating her to be 'companionate'—take pity on your 'wife-sick soul'!"

"Your condition is what will worry you when they put you in handcuffs and permitted Anson to carry off—and then demanded back from it. It didn't make sense."

"The inspector was saying his voice unemotionally again, 'You may take some disproving, you know, Mr. Deck.'"

"I thought of Anson. If that handkerchief was tucked into his hand, it had been in Letty Van Alsty's room."

"I ran the stairs; I took the left-hand branch, so as to pass along the main hall, looking for some maid to question."

"What is it? What—? She murmured, 'Oh, in there — I dashed to the closet; the door was ajar and the light from the room fell into it. Fell upon a pair of shoes, fluff, black, low-heeled shoes, lying on their sides out from under a man's heavy, fur-lined overcoat."

"I did not scream. It seemed to me as if I could never make a sound again, but I did, over my shoulder, to the people crowding now in back of me."

"I had reached Mitchell now. 'Oh, how do you feel?' he asked me for a cigarette this morning."

STAR DUST Movie Radio

By VIRGINIA VALE

That new series of comedies that Patsy Kelly and Lyda Roberts are making promises to be very funny. Lyda was teamed with Hasty to replace Thelma Todd, you know. And the last Polish girl can be very, very amusing.

Don't be surprised if it rains first rains in your town when "One Ruddy Afternoon" is shown in your town. That's the first picture made by Mary Pickford and Jess Lasky, you remember. Mr. Lasky bet that it would rain when the picture was first shown in Hollywood. It did. So he took to the streets for the first showing in New York and again he bet that it would rain that day. And sure enough, it did. Mary Pickford and Jess Lasky, you remember. Mr. Lasky bet that it would rain when the picture was first shown in Hollywood. It did. So he took to the streets for the first showing in New York and again he bet that it would rain that day. And sure enough, it did.

The news about Dick Powell isn't too good; it's said that he will not be able to sing till two or three months from now. What the problem means that Rudy Vallee will take his place in "Stage Struck."

Marion Nixon has just had her tonsils out, which seems funny, because she's been in Hollywood for years and years. Usually having your tonsils out is one of the things you do when you settle down in Hollywood. Your appendix is likely to be the next thing that leaves. And sinus trouble sometimes haunts you.

Joan Crawford seems to be taking her make-up pretty seriously. They do say that she's given up wearing make-up. But for two solid weeks they tried to get a group of full-color portraits of Joan Crawford, the picture artist, and couldn't, because she had a cold and red nose, and color photography is as sensitive as a good looks and historic value.

Those pictures made in Technicolor are causing not a little trouble for companies including in them. They're worth it, of course—but just listen to this!

Princess Pictures was ready to shoot the works on "Dancing Queen." Effort was spared. Little things like special make-up, specially supervised, were just details. But for two solid weeks they tried to get a group of full-color portraits of Joan Crawford, the picture artist, and couldn't, because she had a cold and red nose, and color photography is as sensitive as a good looks and historic value.

AN EXCLUSIVE DRESS SIMPLE TO CROCHET

Even the lady's summertime of his little creature's newly crocheted frock—a style that will give you plenty for lots of four to eight. So easy to crochet, too, in a simple all-over pattern, topped by yoke of plain mesh which serves as sleeves and collar. Use white or colored string. In pattern you will find all directions for making the dress shown in sizes 4 and 8; illustrations of it and of all stitches used; material requirements.

BRISBANE THIS WEEK

164,000 Horses A New Democracy? Thin Men Live Longer Must We Have War?

The well advertised Queen Mary, looking very big moving up to her New York dock, is a sight to be seen in reality the quintessence of compressed power. On the way over she developed one hundred and sixty four thousand horsepower.

That number of horses is a record. It puts one ahead of the other, would make a "team" of a thousand horses, and a hundred and fifty miles long. Still more remarkable is the power compression in that of the firing engine, which compresses the power of a 1,000-pound horse into less than three pounds of metal.

The government offered for sale six hundred millions of 2 1/2 per cent bonds. The whole issue is oversubscribed.

It is a comfort for those that have money and want no risk to invest even at low interest rates, free of income tax payments.

Such an investor is much simpler than running the risk of a business enterprise with pay rolls and jobs attached.

To tax heavily the man who uses his money and brains to give work to others, and free from taxation those that buy bonds and take no risk, is a brand-new kind of democracy.

Men of middle age and older may learn from Civil War veterans in the Memorial day parade, some ninety and some ninety-three; one, who led New York City's G. A. R. procession, past nostalgic years of age.

All the old soldiers are very thin men, averaging in weight less than 140 pounds. Had they been fat they would be in the grave, not in any parade.

General Pershing cut a big birthday cake with a general's sword. Mrs. Roosevelt looking on and on Memorial day he warned America against another war.

To believe that this country can be dragged into a war without a reputation of our big war fully is not complementary to those in charge. No foreign nation would force war on the United States, and thus put United States troops and any fighting qualities that America may possess on the side of that foreign nation's enemies.

The unfortunate congressman, Zioncheck, from the Northwest, is locked up in Washington, his only job is to vote. The unfortunate congressman's antics are not important in themselves, but you wonder what qualities were seen in him by the voters.

The United States Supreme court declared unconstitutional a New York state law that would permit a man to fix a minimum wage for women and children.

Chief Justice Hughes, who did not agree with the majority opinion, wrote: "I find nothing in the federal Constitution, which denies to the state the power to protect women from being exploited by over-reaching employers."

Alfred P. Sloan, Jr., who ought to know about American industry, says enormous building operations are needed in the United States to replace out-of-date equipment, and that the door is wide open for plenty of jobs and then some jobs.

American cotton growers fighting the boll weevil will sympathize with Argentine growers, attacked by vast swarms of devouring locusts, far worse than any weevil. The Argentine ministry of agriculture announced 10,000 tons of cotton devoured, 600,000 acres invaded. Farmers fight the locusts by erecting walls of shot iron or diging ditches, into which the locusts swarm, to be sprayed with gasoline and burned. Tons of the pests are thus destroyed.

Mayors of Arab cities in Palestine warn the British that they must stop Jewish immigration and the sale of land to Jews in Palestine. The British answer to the warning will probably not be satisfactory to the Arabs. It is reported also that the central committee for Palestine of the "Communist party" is distributing literature urging British soldiers in Palestine to mutiny.

The national Socialist convention in Cleveland, formulating "immediate demands," denounces the New Deal, demands a revision of the Constitution and an end of what is called "unearned power" and the point out that in all these matters, others were ahead of the Socialists.

President Lewis of Lafayette college, thinks war would end if more arches who voted for it were put in front line trenches. That might prevent some wars, not all.

Froya Gibbons Adventurers' Club Hello Everybody!

"Riding Lesson" By FLOYD GIBBONS Famous Headline Hunter.

YOU'VE heard stories about how people have learned to swim by getting thrown into the water and having to swim. Well, here's the story of how Duke Edwards learned to ride a horse.

Duke lives in New York city. Maybe you've heard of him. Maybe you've seen him ride horses. He does it pretty regularly now. But he'll bet you've never seen anything half as good as that first bronco-riding excursion Duke ever took, out in Kallispell, Mont., in July, 1912. It was this way. Duke was twenty years old and fed up with the big city. The old adventurer's blood was pumping in his veins and his feet were itching to go places. So he invented most of his money in a railroad ticket and headed west. He didn't know what he was going to do when he got there. But that was soon settled for him. He got on the train, Duke met up with a bird in a big, 10-gallon hat. He got to talking with him, and told him he was going west to see if he could get a job on a ranch.

"Can you ride a horse?" the big fellow wanted to know. Riding a Horse Wasn't One of Duke's Accomplishments.

Well, Duke couldn't ride a horse any more than he could walk a tight rope, but he wasn't going to let that stand in his way of getting a job. "Sure I can," he said. And right there, his troubles started.

The big fellow told Duke he was a rodeo rider. He'd just finished up working for a wild west show, and he was going to get a cowboy outfit and see if he couldn't work him into a job somewhere. That was more than Duke had figured on.

I must have bluffed his way through the business of riding a tame horse, but getting aboard one of those bucking bronchos they ride in the circus was another thing altogether. The more he heard about that job, the less he liked it. But he was simply not to be deterred. The big fellow staked him to a set of cowboy clothes, and Duke owed him so much money that he just had to have a job to pay it back.

The Reward for Bluffing Is Usually a Show-Down.

Duke began hoping they'd turn him down when he applied for a job—but they didn't. The big fellow saw to that. He went to work at seventy-five bucks

Rearing and Snorting the Horse Plunged Up and Down.

a month and his keep, and since it was off season and the show was in winter quarters, he managed to bluff his way through the first couple weeks. The horse's method was simple, but it had its kickback. He just braggod so much about what a good broncho buster he was that everybody took it for granted that he knew his horses. But all that talk was just going to make things worse for him when the big show-down came.

Duke looked the rest of the show, but he couldn't kid the big fellow. When he found out Duke couldn't ride a horse, he started teaching him as much as he could. But you can't teach a man to bust bronchos in two weeks, and that's about all the time they had before the show went on the road again.

Duke had a streak of luck the first week or two the show was on the road. They forgot about him or something. Anyway, nobody asked him, he rode a horse. Then, in Kallispell, Mont., the blow fell. And a tough blow it was, too.

"Dynamite" Was a Tough Specimen of Horse Flesh.

Kallispell was a great ranching town. A cowman in the neighborhood brought in a bad horse that went by the pretty name of Dynamite, and Dynamite's reputation was so bad around that neck of the woods that the show offered a prize of a hundred bucks to the first cowboy that stayed on his back. And the first name drawn to ride Dynamite was—you guessed it—Duke Edwards.

"I didn't say anything," says Duke, "but I felt myself going into a faint. By this time I knew how to mount a horse and ride it around the arena, but I'd never been on a buckler. It took six cowboys to saddle that brute and hold him so I could mount, but I had to act as if I wasn't afraid. I climbed into the saddle, and then, with a yell, we were off.

The horse started rearing and snorting, and went down to his knees and bounced up again. I thought my head would snap off my neck. I felt myself fainting, but I stuck to the horse until we reached the bandstand."

Duke Played a Solo on the Big Bass Drum.

It took Duke and Dynamite just about forty seconds to reach that bandstand, but remember, that's quite a while to be on a bucking horse. It was at the bandstand that it happened. There, Dynamite put on an extra pound or two of reserve steam. He gave a last leap, kicked up his heels, and Duke went flying over his head.

Straight into the bandstand Duke flew. He could see the big bass drum coming up at him—felt his nose flatten out as it hit the drumhead. Then everything went black until he awoke in the hospital with a busted head and a big cut in his forehead.

And did they like Duke after that? Well—that's the funny part of it. Everybody said he'd given that Dynamite horse one heck of a good ride. Duke stayed with that outfit for three years and rode plenty more tough horses. Then he went into the movies and rode in western pictures, so you're probably seen Duke at one time or another, on the screen. And that one experience, he says, has given him the only rule of success he knows. "First throw your bluff," says Duke, "and then make it good."

Famous Maps of Path to Young Woman's Heart

As one journey along the Rhone in France from Avignon, it becomes an easy matter to explain the famous maps of the "Path to a Young Woman's Heart," which the Curia of Lome, held here in Seventeenth century, designed in making the river from Avignon takes in good part the city funked at the character of the city's inhabitants in the tale "Tartarin of Tarascon." The people of the town now go so far as to sell pictures of Tartarin on his expedition in the Alps, and some will even point out to gullible travelers the place where he lived.

Arles, also in this vicinity, is famed for its Roman antiquities. It is mentioned in the "Path to a Young Woman's Heart," has 65 feet of seats and holds about 28,000 spectators. In the summer months it is a scene of many bright lights. The old theater of Arles

Gay Cotton Print Dress Easy to Make and Sure to Please Sprightly Maiden

Pattern No. 1832-B

The time for gay little cotton prints best for older sister and the younger set is at hand, and nothing could be simpler than this darling dress—so easy to make—so comfortable for nimble dears—and so smart to wear.

The French bodies affect and buttoned panel, are cunning details which all little maidens love, especially the flared skirt, because it provides ample freedom for playtime. Decorative features are hidden in the contrasting color trimmings with ruffled edging and belted puff sleeves. The material may be a printed percale, lawn linen or gingham. If it is made in a plaid or checked gingham.

DIFFICULTY AND STIMULUS

Difficulty is only a word indicating degree of strength requisite for accomplishing particular objects, a measure of the necessity for exertion, a stimulus to children and fools, only a hindrance to men.—Waxen.

GAS-MAKING STOVE COOKS MEAL FOR 2c

Amazing New Invention of W. C. Coleman Burns All the Modern Conveniences of City Gas to Homes Beyond the Gas Main

Economically-minded housewives will share the enthusiasm of W. C. Coleman, inventor, genius, for his new gas-making stove which cooks for two for 2c or less.

The new Coleman Range burns just like gas. Makes its own gas from ordinary lead-free gasoline. Its heat of coal, wood, kerosene, oil, or kerosene stove, and so on, quicker and better.

This remarkable new Coleman safety Range heats instantly just like gas. Makes its own gas from ordinary lead-free gasoline. Its heat of coal, wood, kerosene, oil, or kerosene stove, and so on, quicker and better.

Mr. Coleman uses Eveready Metal for the fuel tank, a big safety feature. Eveready metal will not rust or corrode.

In addition to providing every cooking advantage of the finest city gas range, Mr. Coleman's new Range adds beauty in the kitchen by distinctive styling and pleasing color effects in gleaming porcelain enamel finish.

Readers of this paper wishing full information about these wonderful Coleman Ranges will receive an illustrated literature and a valuable Service Check Chart by addressing a postcard to W. C. Coleman, Dept. WU-285, Wichita, Kansas—A.

CHILDREN'S DAY PROGRAM SUNDAY

Presbyterians of Prestonsburg are to observe next Sunday morning the annual Children's Day in a combined Sunday School and morning worship service at 9:45 o'clock.

All members of the Sunday School and congregation are urged to be present, and the general public is invited to attend. There will be a special program in music, drama and other numbers after the class period.

An offering will be taken for the cause of mission Sunday Schools among children who may otherwise lack opportunity of hearing the Gospel of Christ.

"The Piper and the Man," a one-act mission play is being prepared under the direction of E. H. Stone and Mrs. Henry Beavers. Members of the cast include: Allee Gray, Frank Heinze, James G. Gable, Eddy Philpot, Ruth Vivian Stanley, Puchy Howard, Jane Carroll Hager, Thelma Jean Africa and George William Belcher.

The program of the service beginning at the close of the class period at 10:30 o'clock follows:

Call to worship, superintendent; hymn, "The Shepherd Calls"; invocation and Disciples' prayer; report of secretary; pianoforte solo, Eloise Williams; responsive reading; songs by beginners and primaries; "Story of the Lesson," Belvard Friend; books of the Old Testament, Wm. C. Coleman, "Come Me," talk, Robert A. Potter, music; prayer; hymn, "Tell It Over and Over Again"; church offering; play, "The Piper and the Man"; benediction and the Doxology.

THE GANGSTER EXIT

Most of us probably failed to notice it, but the fact is that an epoch in American history—an ugly, un-savory epoch—will have recently come to a close.

This epoch was that of the gangster. It began about 1920 and persisted out a few weeks ago with the bringing of justice to such specimens as Alvin Karpis and "Lucky" Luciano. And in the study of its rise and fall, there is a wealth of illumination about the ways and customs of the American people.

The principal bit of illumination is the not entirely surprising fact that we did it all ourselves. We sought on the era of crime, and we got it. If we had gangsters because we were at it, we were at it, and we were at it because, by the way of Providence, we are what we are. The good that is in us and the bad that rides along with it played equal parts in the era of gangsterism. It is easy to say that we wished gangsterism on ourselves by passing prohibition law. Easy—and in-

teresting. For, although prohibition gave us city tough his chance, he didn't get out of the yard. We had no use for him, and given him a help for to carry—long before.

We did that chiefly by forgetting what of the race's oldest axioms—where there is no vision the eye perishes.

And there was precious vision, during those dark and feverish years; or if there was, it was clouded over so that we seldom saw it.

We tolerated slums, crooked politicians, fixers of high and low degree, four-flushers, go-getters; we let the wealth-hungry gripes writhe most over us, decided that the man who had the most money must of necessity be the finest citizen, and figured that any city with tall skyscrapers and handsome boulevards must be flourishing.

We were, in other words, on the make pretty steadily. We sowed in disregard of the spirit, and we reaped—among other things—gangsterism. We got just about what we asked for, and we had nobody to blame but ourselves.

But there is a brighter side to it. It didn't, after all, last forever. The country did wake up, finally. Once more, as of old, it showed that American wrath can be a terrible and deadly thing when it is roused; and it swept over the underworld in an irresistible tide.

The epoch is over now, but the record remains for us to study. By studying it we can learn something; we can learn our own strength and our own weakness, we can learn the price we have to pay for our folly. The story points its own moral. May we take it to heart so that we never have to repeat the experiment.—Ashland Daily Independent.

GOOD PRICES, SMALL CROPS

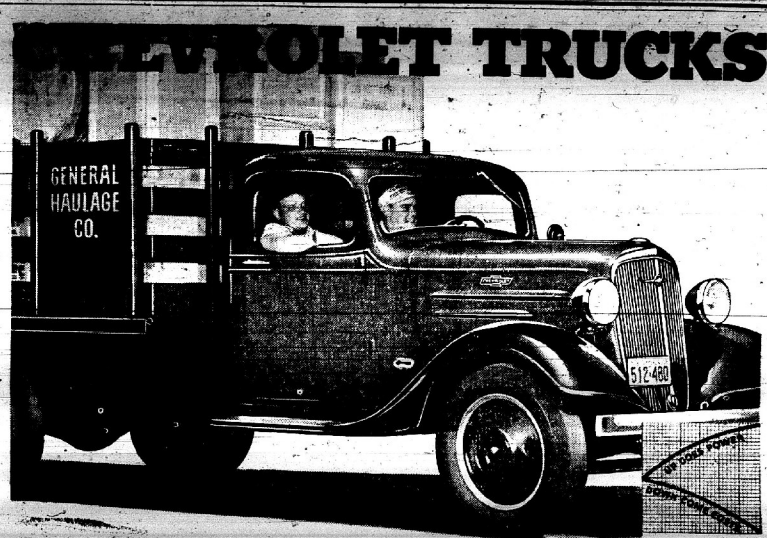

Padush, Kentucky's largest strawberry shipping center, closed its shipping season Saturday after an unsatisfactory season, as far as yield is concerned. Only 200 carloads of berries were shipped to Northern and Eastern markets, as against 300 carloads last year. The lack of rain is responsible.

The Jefferson County Fruit Growers Cooperative Association expected to ship 60,000 cases this year, but had only 12,000 in hand. The drought has so reduced the quantity of the product that the association has ceased to ship. It has a reputation for quality, so maintain its agent wisely selected fruit and the well-known "Kentucky" brand on poor berries. After the first week, the quality of the berries fell off rapidly.

Every producing center, not only in Kentucky, but in Tennessee, Alabama, Indiana, and even now in Michigan, has felt the blighting lack of rain. Louisiana was the only state getting a full crop.

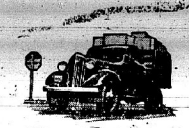

Jefferson county growers, however, received a good price for their berries. Opening at more than \$3 a crate for the first fruit of the season, the price for top quality strawberries has held up well, and the average for the fancy No. 1's was some-thing more than \$3 a crate.

One-fifth of a crop at a price 50 per cent better than usual does not pay the farmer, but there was no such thing as a free lunch. At that, it was better than a bumper crop with a glutted market. Strawberries are a precarious crop dependent upon the slightest whim of nature.—The Courier-Journal.

MENINGITIS CLAIMS BOY IN AMBULANCE ON WAY TO PAINTSVILLE HOSPITAL

Bert, nine-year-old son of Mr. and Mrs. Troy Horton, of Rock Fork 1 1/2 weeks, near Garrett, died Saturday noon of spinal meningitis as he was being rushed in an ambulance to a Paintsville hospital.

The body was brought to the undertaking offices of E. P. Arnold here, and after burial preparations were made it was returned to the Horton home where funeral rites were privately conducted Sunday. Burial was made in the family cemetery on Rock Fork. Surviving are the bereaved parents and several brothers and sisters.

NOTICE TO WATER CONSUMERS

DEAR PATRON:

For your convenience Mrs. Richard Davis will be at The Bank Building during banking hours, except between the hours of 12 and 1 o'clock, the first 10 days of each month, beginning June 1, 1936 for the purpose of collecting water bills.

This service is being in-posed for your convenience and we trust you will take advantage of it possibly. All persons not paying at the bank on or before the 10th of the month will be subject to having their service discontinued.

Yours truly,
PRESTONSBURG WATER CO.

A. J. BURCHETT DIES AT GIBSON SUNDAY AT THE AGE OF 75 YEARS

Several years ago, Surviving him are his daughter, Mrs. Pack, and two sons, Jesse, of West Virginia, and a son whose name is unavailable, and who resided in Iowa. Funeral rites were held at Gibson, Monday and burial was in the Stamba cemetery, and the interment advanced for the division of E. P. Arnold.

Though a native of the Johns Church group took an active part in the church of this county. Mr. Burchett had resided for the greater part of his life in Johns county. Some women walked distances of 12, and was well-known in this section for his fine collection of birds. His wife preceded him in death their votes.

PLANS LAID FOR FLOYD WPA WORK

Continued from page one
The order in which projects will be completed, it was said, follows: 1. Projects already in operation; 2. projects submitted and approved but not yet started; 3. new projects.
Projects listed by the fiscal court as "approved" follow:
Wayland-Hill road, Abbe Creek, route from Garrett up Rock and Fork to the Knott county line, and Creek to Ligon road, Salt Lick and Branch Creek roads, Toler Creek route from Ambia to the Pike county line, Honner bridge, Ancker, Bull Creek and left fork of Middle Creek roads, walk bridge across Bright, Beaver Creek at Lackey.
Mayor A. C. Carter listed the following projects here as most necessary: Building in West Prestonsburg and several two-room school structures were tentatively listed.
Representing the WPA were Arthur Gamble, district director; E. H. Meredith, district engineer; R. K. Kelly, assistant supervisor of railroads; H. H. Hays, supervisor of labor relations; and F. W. Clay, area engineer.
The fiscal court was represented by County Judge W. L. Spitzer, County Attorney T. J. Allen, Magistrate M. C. Wright, Ex-Magistrate Dewey Roberts attended and suggested projected projects for Magisterial district No. 4. Mayor Carter represented Prestonsburg and Mrs. Hall, the county board of education, the health department.

ferred list," but the rate had not been considered as a WPA project because "the state had made surveys and the road had been completed, it was said, following a state project. It was indicated, however, that the WPA may undertake the work if the right way can be procured.
WPA officials pointed out the need for machinery in order to expedite the work. The county is considering the purchase of a tractor and grader, they were told, and these may be made available on this work.
The county is to receive approximately \$22,000 from the state for road work.
The county board of education, represented by Mrs. Town Hall, was asked to have a list of building projects submitted at once. A school building in West Prestonsburg and several two-room school structures were tentatively listed.
Representing the WPA were Arthur Gamble, district director; E. H. Meredith, district engineer; R. K. Kelly, assistant supervisor of railroads; H. H. Hays, supervisor of labor relations; and F. W. Clay, area engineer.
The fiscal court was represented by County Judge W. L. Spitzer, County Attorney T. J. Allen, Magistrate M. C. Wright, Ex-Magistrate Dewey Roberts attended and suggested projected projects for Magisterial district No. 4. Mayor Carter represented Prestonsburg and Mrs. Hall, the county board of education, the health department.

DEROSSETT HOME, CONTENTS BURNED

Sunday Night Blast Here Laid To Defective Wiring; Estimated Loss, \$1,000

Home of Frank Derossett and all its contents were destroyed by fire Sunday night at 10 o'clock, causing an estimated damage of \$1,000. The family was away from the home at the time. It is believed that the blaze had its origin in a gas stove in the living room. When the fire was discovered, the north side of the building was blazing.
Work of the Post-Office, truck, manned by volunteer firemen, saved the adjoining home of Senator Joe P. Tucker.

POLITICAL ANNOUNCEMENTS

FOR CONGRESS
We are authorized to announce DOUG HAYS as a candidate for Congress, from the Seventh Congressional District, subject to the action of the Democratic party at the August primary 1936. Your support and infence will be deeply appreciated.

NOTICE TO CONTRACTORS TO BID
Contractors interested in submitting bids for the construction of a courthouse at Livingston, Floyd County, Kentucky, are advised as follows:
Due to the lack of time in which to prepare and submit bids on or before May 25, 1936, the original date for awarding the contract, a large number of contractors were deprived of submitting bids at said courthouse and no bids having been received or submitted, the Building Committee and the Fiscal Court of Floyd County, Kentucky, do hereby:

On Friday evening, June 5, at 7:30 p.m., at the home of Mr. and Mrs. Gordon Francis, the Rev. Harry P. King, pastor of the M. E. Church, South officiating.
The service will be a quiet affair in the presence of only a few intimate friends and relatives. The bride had as her only attendant her sister, Miss Myrtle Franklin, and the groom chose his brother, Mr. H. O. Zimmerman, as his best man. The bride wore for her wedding dress a tan-velvet blue crepe, with white accessories. Her sister wore a grey dress of pale pink.
Mrs. Zimmerman is the daughter of the late Mr. and Mrs. Watson Franklin and has for the past four years made her home here with her cousin, Mr. Gordon Francis. She was educated at the Hindman Settlement School and at Upland College. She is 24 years old, is critically ill with the malaria, while Betty Zimmerman, 9, is recovering. The nine-year-old son of Mr. and Mrs. Fred Miller Falls, Miss, and is employed on route to a District hospital as a bookkeeper for the Infant Sunday. His death was attributed to meningitis.

REWARD
The person who has information leading to the recovery of a stolen automobile, a 1934 Buick, make of black, 24. Always to name of "Black".

JUNE WORK SUGGESTIONS

Peaches, apples, peaches and sweet potatoes constitute some of the major crops on the farm of H. R. McUmber, Weakley County, Tenn. Here is shown his peach orchard. This young orchard borders a field of sweet potatoes.

Cold Weather Only One Foe Of Indiscreet Peach Blossom

YOU can't grow your peaches, and eat them too, unless you spray them.

The peach is a child of destiny in the fruit world. It is indiscreet about coming out in the Spring, blossoming gaily when freezes are common farther North, and when these same freezes are apt to swoop down deep into the South. But, cold weather isn't the big enemy of the peach. What escapes late Spring freezes and frost, may succumb to scab, brown rot, curculio, scales and leaf curl.

The most common disease of the peach, say plant pathologists of the University of Tennessee, is brown rot.

The most abundant scale insect is the San Jose scale. A dormant spray of three

per cent lubricating oil is advised.

Digging out by hand, or gouging with paraffin benzene is suggested for controlling the peach borer. Gouging is not advised for trees under two years of age.

For brown rot, these sprays have been successful. First: Dri-mix sulphur, with lead arsenate added in the first four sprays. Second, lead arsenate plus lime in first, second and third sprays. For the last two sprays, use flotation sulphur and Dutox. Rates of mixtures follow: Flotation sulphur, 20 pounds to 200 gallons of water. Dry mix, 8-8-1/2-50. Lead arsenate, one pound to 50 gallons of water. Dutox calls for six pounds to 200 gallons of water.

GENERAL FARM WORK—Sow soybeans, cowpeas, Sudan grass; strip bluegrass seed; cut wheat, rye, barley and oats, clover for hay, timothy for hay, second crop of alfalfa hay, orchard grass for hay; cultivate the corn.

LIVESTOCK—Wean pigs, treat sheep for stomach worms, finish selling early lambs, sell broilers.

FRUIT—Spray apples for codling moth, peaches for brown rot, cherries for leaf spot.

Hay Quality Important

Hay quality, always important, should cause more thought to early cutting. This is especially true of alfalfa, clover and timothy. Old, woody, coarse hays furnish much less feed than do young and tender plants. Of course, hay can be cut when too watery and before it has developed to its best feed value. However, the mistake is more often made by allowing it to over-mature. Early mowing of clover makes for a better seed crop, which comes along in late August on the second growth.

Sudan grass makes an excellent supplementary pasture for the dry months of July and August. It should be sowed early in June. Likewise, soybeans and cowpeas should be sowed early in the month.

More attention should be given to early corn cultivation. Early, shallow plowing controls weeds before they get a start. Thorough cultivation in May and early June is far better than strug-

gling with big weeds later in the season.

Spray Fruit Trees

Codling moth on apple trees should be cleaned up in June. The first brood is still active then, and if it is well subdued there should be little bother with the second brood. See your county agent for details of codling moth control.

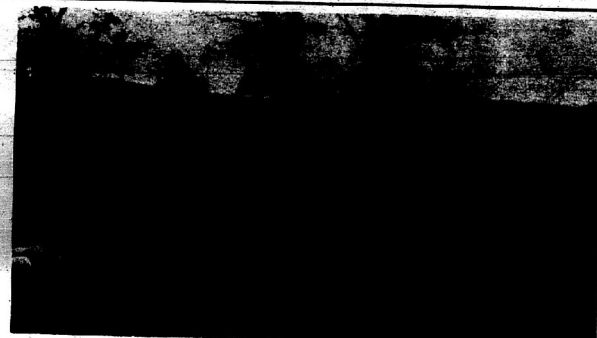

Peaches should be sprayed two or three weeks before they ripen for the control of brown rot. Wettable sulphur is used.

After cherries are picked they should be given a thorough spraying with sulphur to control leaf spot. This is highly important.

Eight weeks is about the proper age to wean the pigs. To permit them to run with the sow longer is just a drain on the sow and does the pigs no good. Pigs begin to eat grain when about three weeks old, and should then be provided with a creep where they can eat unmolested by the sow. If they have been properly fed grain, weaning will be easy.

All old sheep and all lambs to be carried on the farm now July and August should be treated for stomach worms in June, and every month thereafter. Lambs sold this month need not be treated. This matter of stomach worms is becoming increasingly important. New kinds are appearing in Kentucky and Tennessee.

Tennessee Wool Better Handled

TENNESSEE wool producers are finishing up a series of cooperative wool sales which began the first week in May in 40 towns.

As a preliminary, some 30 shearing demonstrations were staged under auspices of the U. T. extension service. Points in grading and cleaning wool were discussed and actual work done. These demonstrations resulted in obtaining better handling of the wool.

C. C. Flanery, U. T. extension specialist in sheep husbandry, stressed means of preventing rejections and eliminating

conditions leading to low grading of the wool. He warned against poor cleaning methods. Proper tying, to facilitate handling was emphasized.

Beginning June 5, lamb shipping dates were set in East Tennessee counties, and will last through the first week in July. The lamb market period closes at Knoxville July 10. The annual purebred ram sale at Nashville, July 15, will be the high spot of the season for producers.

Ewe sales and the annual 4-H Club boys show and sale, will be held at Nashville, November 12-13.

They Build Their Own Utopia

Above, Utopia Club members at Junior Week, University of Kentucky. Left, where Miss Nell Jasper Barnes, Pulaski County, won the state championship gold medal with a landscaping project. Right, Carl W. Jones, director of Utopia Club work for the Kentucky College of Agriculture.

The Kentucky College of Agriculture claims the lead of all states in its work for older farm boys and girls who have "graduated" from 4-H Clubs or are too old to be members. In Kentucky, 18 years is the age limit for 4-H'ers.

In 1930, Carl W. Jones, agricultural agent in Todd county, was called to the college at Lexington and given the job of "fathering" the older farm boys and girls of the state.

As a name for his new work, Mr. Jones selected "Utopia" as the ideal toward which his boys and girls might work. The training was to be principally in leadership and recreation, although there would be projects such as in 4-H work.

Utopia club work is going forward in 24 Kentucky counties, with a total membership of approximately 1,000 young men and women.

Projects include tobacco growing, farm accounts, small fruits, orchards, landscaping, poultry raising, dairying, beef calf production, permanent pastures, farm shops, and canning, clothing and room improvement for girls.

Plans call for a canning exhibit and livestock judging team at the State Fair.

Three Utopia camps are in the 1936 schedule.

The state champion gold medal Utopia girl is Miss Nell Jasper Barnes of Pulaski county, on landscaping work.

IT'S JUNE In Kentucky

By P. E. Karraker

Fayette County Farmer and U. of Ky. Faculty Member.

"Long about knee deep in June,
"Tell you what I like the best:
"Bout the time strawberries melt
"On the vine—some afternoon.
"Like to jes' get out and rest,
"And not work at nothing else!"

P. E. Karraker, but so are all months on the present day farm.

June is quite a month on the farm, but not in just the way James Whitcomb Riley thought of it. It is a busy and an important month on the farm,

ing, barley is an excellent feed crop and deserves more attention in Kentucky than it has received. It does not yield as well as corn, but does make good yields of productive land. Since it is imperative that we grow less corn in Kentucky because of our rolling land, and the erosion that occurs when this crop is grown, we could well consider growing more barley.

Profitable As Corn

Sloping land in good sod could be plowed in the late Summer and barley seeded in the last half of September. Considering the fact that the barley is off the land in June and that lespeeza seeded in the Spring probably will make a hay crop in late August, it may be just as profitable to crop land in this way as in corn. Two or more crops of barley can be grown consecutively, with Korean lespeeza between, before the land

Pasture land should be watched and not overgrazed at this season of the year.

Cultivation is imperative now to destroy and control weeds.

Soybeans can be planted any time this month. They get a better start after the weather is warm.

To Increase Yield

If the tobacco crop does not grow off as it should and if the leaves are a pale green color, indicating a shortage of nitrogen, and if also it is known that ample supplies of phosphate and potash are available, it probably will pay to side-dress the crop with a soluble nitrogen fertilizer, such as sodium nitrate or ammonium sulfate, at the rate of 150 to 300 pounds per acre. Care should be taken not to get the materials on the leavys. Tobacco can be side-dressed in this way any time until it is half grown.

With most of the tobacco set, it is important that good sized plants be used for the late set tobacco. Fertilizers which have not been applied to the tobacco land should be applied along the row before the plants are set or, as soon as possible after setting is finished. Unless the fertilizer is sodium nitrate or some other soluble nitrogen fertilizer, it should be applied before setting, close to but not directly in the soil where the plants will be set. Fertilizers placed in the soil where the plants are set are likely to cause a poor stand when the weather is dry at setting. There is no other adverse effect on the crop from fertilizer in a dry season, although the crop may be held down by lack of water so that the fertilizer does not have a chance to increase crop yields. It is to be expected that the well fertilized crop will come through a dry season better than on poor land.

June Cultivation Valuable

June cultivation of corn and tobacco is the most valuable. If a good seed bed has been prepared and many of the weed seed germinated and destroyed before the crop is up and if this is continued by cultivation when the crop is small, weeds will be pretty well under control. Little cultivation will be required after the crop is of considerable size. Practically the only value of cultivating corn and likely tobacco also, is in destroying or controlling weeds.

Barley and wheat will be cut this month so make sure the binder is in good shape.

Red clover and the first cutting of alfalfa hay will be made this month. I like to cut red clover before it gets too mature. A more nutritious and palatable hay is made than if cut later, with no great reduction in yield. Alfalfa should not be cut too early. Wait until the plants are pretty well in full bloom. Early cutting weakens the plants for later cuttings.

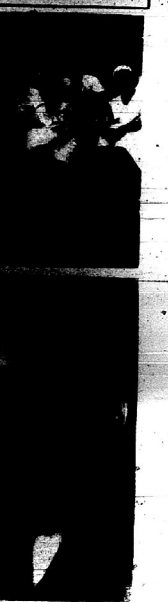

With most of the tobacco set, it is important that good-sized plants be used for the late set tobacco, so that they will grow off rapidly and partially overcome the late start. Fertilizers which have not been applied to the tobacco land should be applied along the row before the plants are set or as soon as possible after setting is finished.

The first cutting of alfalfa will be made this month. Mr. Karraker warns, however, that it should not be cut too early. "Wait," he advises, "until the plants are pretty well in bloom. Early cutting weakens the plants for later cuttings." (Right) County agent inspects a farmer's alfalfa hay.

BLACK BASS MOST POPULAR

By DICK WOOD

THE black bass, small-mouth or large-mouth, is the most popular game fish that swims in American inland waters.

There have been many hot arguments as to which is the gamer, bass or trout. Certainly the bass is no inferior fighter. The small-mouth bass taken on a flyrod will put up a fight not surpassed by any fresh water game fish of equal weight.

The small-mouth is generally taken in rapids, fast water over a rocky bottom, or around rock ledges. The large-mouth frequent lakes, ponds and still holes in rivers, preferring weed beds and lily pads for cover. Dark blotches of the small-mouth are inclined to be vertical. In the large-mouth, the dark line is lengthwise of the fish. Scales of the former are smaller.

Plenty of Fight

The main points of identification are the mouth, and cheek scales. The angle of the small-mouth's maxillary slopes under the eye; in the large-mouth it extends back of the eye. The small-mouth has 17 rows of scales on the cheek to 10 or 11 on the large-mouth. The small-mouth is also apt to announce its cognomen in the way it fights, because no large-mouth can equal it.

Both are taken by bait fishing, but the most popular method of taking the large-mouth is by casting "plugs." The small-mouth takes flies readily, but especially nature lures and spinner flies. The most killing lure I used last season for small-mouths was a Peck's under-water minnow in the Babcock pattern.

Landing a 10-pound large-mouth bass in a Florida lake near Lynne

They just ate it up!

One of the best early season lures for the bass is the helgramite, found under the stones of mountain streams. Other favorite baits are minnows, frogs, spring lizards, grasshoppers, crickets, crawfish, and bugs. Flyrod artists will need a box full of popular bass bugs, in about 1-0 size.

Watch For Strike

Bait casting is generally done from boats. Start the season with a new 18-lb. test, silk-braided line and a few half-ounce lures. I am partial to the River Runt and Crab Wiggler lures; although a jointed minnow is second best. Under-water lures should predominate. A few weedless feathered lures are needed to get among the pads. Make your casts close in under over-hanging banks, next to rock ledges and weed patches.

When fly fishing for small-mouth, let your lure ride down with the rapids, pulling it by submerged rocks or over underwater crevices where the bass hide. Work the big pools. Let your under-water lure sink, then retrieve a yard at a time, imparting life-like action. When fishing surface bugs, leave them motionless on the water for a minute, then twitch the rod tip, and look out for the strike.

grow and fatten on more kinds of feed than will any other critter—an' hogs can be sold at any time or age or weight.

Ever look in the dictionary and see the different things "hog" means? "A sheep about a year old that has never been shorn." "To cut short a horse's mane so as to make it bristly."

Surely no more colossal ignorance could exist than some town fella's sense, or lack of it, about things in the country. The other day a new neighbor came to borrow a gun to shoot a "chimney sweep" that sang all night. It was a mocking bird, and he thought it a "chimney sweep" 'cause it sat up on his chimney and sang—and his wife complained 'cause the quail waked her up at daylight "Bob-whittin'" and-called the bull a "male cow"—and fussed because there was water in the buttermilk.

Eatin' peas with your knife and usin' toothpicks maybe ain't the best modern manners, but a lot of fellers in the country who do this have got a lot more brains in their head, and know a mocking bird from a "chimney sweep."

Truth is there's a lot of comfort and satisfaction in breakin' some of the rules of etiquette—eating chicken with your fingers and sopping big hot sody biscuits in the gravy, and "sucking up" your coffee like the old folks used to. May not be just the thing to do—but it makes 'em taste mighty good.

In Ireland the pig's known as "The Gentleman that pays the rent"—and he's about that here, too—'cause a hog'll produce more meat from 100 lbs. of feed than any other animal. He'll eat and

Missouri Style Stock Farm in Central Tennessee

W. T. Moffitt Manufactures Roasts of Beef and Porterhouse Steaks on the Hoof in Warren County

By G. H. DACY

Beau Delaware V, the herd bull, is distinguished, in the center of the picture, by his horns.

WITHIN rifle range of the historic old Daniel Boone Trail which bisects Tennessee and penetrates to the famed Bluegrass of nonpareil Kentucky is an outstandingly successful stock farm of the kind you customarily might expect to see in central Missouri but which is rather rare in the latitude of Memphis.

And not so far from where the early settlers from Virginia and North Carolina carved a portion of the future State of Tennessee from a virgin wilderness, W. T. Moffitt of Warren County today raises breeding Herefords and manufactures porterhouse steaks and roasts of beef on the hoof for future consumption.

Moffitt, the name of this stockman, may not signify much to you unless you know him, but to the people of Warren and contiguous counties, it stands for substantiality, patient persistency, and reputable reliability.

Expands Operations

Mr. Moffitt owns and lives on the farm his father cultivated successfully. The Moffitts rank among the leaders of Plainview Community, one of the oldest communities in Warren County. Where his father was satisfied to farm the original Moffitt home place of 123 acres, W. T., the son, has expanded his operations and increased his herd until he now operates three farms merged into one. As soon as he was financially able to, Mr. Moffitt bought the interests of the other heirs to his father's farm. Subsequently he purchased two adjoining farms, 155 and 100 acres in extent. He now owns and operates a well-organized stock farm of 378 acres, his postoffice address being Rock Island, Tennessee.

Mr. Moffitt is president of the Warren County Farm Bureau, director of one of the leading banks, director of the Warren County Fair Association, a leading counselor and advisor in 4-H club work as well as an outstanding local leader in civic, church, and school activities. Here is a countryman of unselfish instincts who works for the upbuilding and progress of the community and county in which he lives with similar zest and zeal to that which he exercises in the improvement of his private farm and herd of registered Herefords.

Practical Stock Farming

The Moffitt stock farm and its systems of management are not presented as models for the entire South, although many establishments would benefit by revising their methods to coincide with those of this Hereford breeder. Everything fed on the farm is raised within its borders, with the exception of cot-

tensed meal. That is practical stock farming in the fullest meaning of the term. In addition to the fertility scattered by the grazing animals, more than 100 spreader loads of manure are annually hauled to the neighboring fields as top dressing.

The Moffitt farm supports 36 acres of permanent bluegrass and other native grass as well as 115 1/2 acres in rotational pastures. Approximately 100 acres is cropped annually; some 60 acres consists of woodland, and feed lots, roads, and waste and idle land on this farm aggregate about 20 acres. Around 20 acres is cropped to corn, the average crop being about 1,300 bushels with approximately 70 tons of corn-stover as the by-product. The oats field, ranging from 15 to 18 acres generally yields about 12 tons of feed; at least ten tons of hay are harvested from the five-acre patch of alfalfa. A 15-acre field of Korean lespedeza, in addition to providing good summer grazing, produces an average hay crop of one ton to the acre. Twenty acres in wild hay is also mowed each year and yields around 22 tons. Only six acres is devoted to wheat, enough to provide sufficient straw. Considerable sorghum is grown in the cropping system as a worth-while cattle feed. The pastures are mowed twice annually; winter rye, crimson clover, and wheat are grown for winter pasturage. Rye and crimson clover are sown when the corn is cultivated the last time.

Mr. Moffitt usually shreds corn fol-

der to facilitate its efficient use by the cattle and work animals.

The Moffitt farm layout was planned with stock-farming in mind. Well-built buildings are satisfactorily located in relation to pastures. The farm is under fence, cedar posts being used, because of their long life and general utility. A new addition to the big barn was recently built of timber logged and milled on the home farm.

Started Herd in 1926

Mr. Moffitt embarked in the Hereford breeding business in 1926 with a foundation herd of 12 purebred cows of Fairfax blood and a registered bull of Anxiety lineage.

Any animal, which does not satisfy his owner's ideal of the standard toward which he is striving, is culled from the breeding herd, fed out and fattened for beef. Under this system, the Moffitt herd increased to a population of 26 cows, 24 yearlings and two bulls by 1934. Today, it features 66 purebred cows of Hereford breeding.

Herefords have always ranked high as meat producers; no beef breed excels them in early maturity. The "white-faces" have probably improved more in

the United States than any other beef breed. Herefords weigh heavy for their size, and are of first rank in constitutional vigor. It is one of the largest breeds of beef cattle, with males frequently weighing 2,200 pounds and females 1,500 pounds or more. Herefords respond quickly to good pasture and grain by distributing well-marbled flesh over their bodies. The Hereford excels other breeds in beautifully formed shoulders, evenly covered with flesh at market time. The Hereford is superior in quality, fine bone and hair and a mellow, elastic skin. Which probably explains why Mr. Moffitt selected Herefords.

Between 10 and 12 calves are debarred from the Moffitt herd annually because of defects which this experienced breeder believes sufficient justification for their culling and fattening for beef. These youngsters are fattened on grass and such grain as cottonseed meal and corn-and-cob meal feed. The fat stock when ripe for market are shipped to local terminal markets where the animals command top prices. They practically qualify in the baby beef class.

Climate Favorable

The aim in handling the breeding herd is to maintain the animals in healthy, thrifty condition, allowing neither cows nor herd sires to get too fat. The climate is especially favorable; the beef breeders run outdoors practically the year around. Breeding stock is sold through advertisements placed in breeders' journals and livestock periodicals. Mr. Moffitt has built a reputation as a man who is particularly careful and thorough in culling his registered cattle.

It takes time to start a purebred cattle business like that of Mr. Moffitt. There are lean years when the herd is being developed and when the reputation of the breeder is being built. This Tennessee stockman tided his operations over that trying period by feeding beef on considerable scale as a source of current income. As the breeding herd increased, he gradually reduced specialized beef manufacture in favor of better blood for breeding distribution. He has ready sale in the neighboring counties and his state at large for all the high-quality Herefords which he can produce.

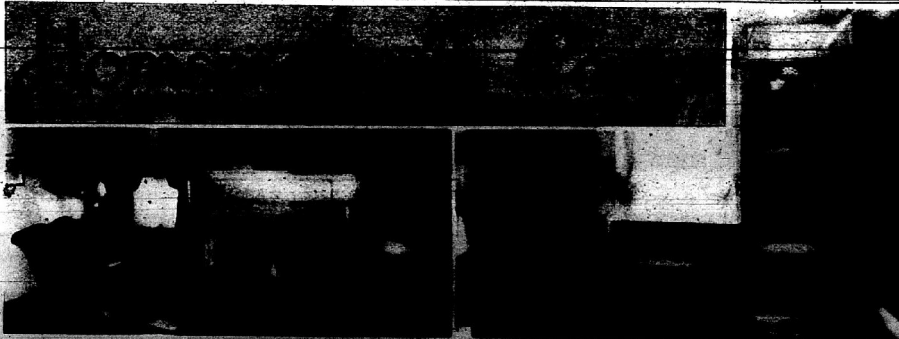

A suckling colt, one 3-year-old and one 4-year-old mule on the Moffitt farm, where all work stock is home raised.

Mrs. Beatrice McCauley enjoys the old living room, brought up to date, in her home, Greenwood, Albemarle County, Va.

More storage space is afforded by built-in closets placed by Mrs. McCauley in an upper hall.

Gentlewomen of Virginia Take The Lead

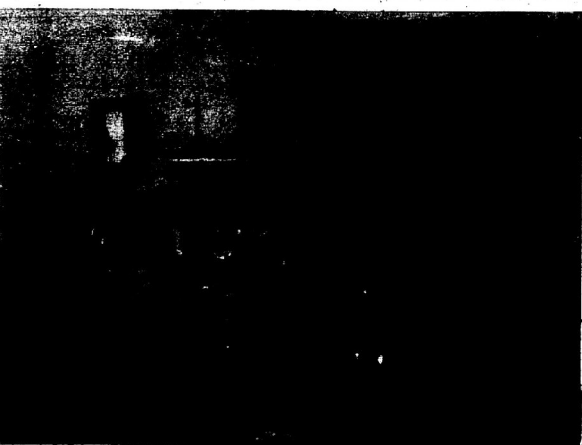

By Charlotte Miller Temple

An enclosed stairway opened, a rail substituted for a partition, and floor refinished modernize the old Peter Gann home.

Built-in clothes closets on the back porch provide storage for work clothes and tools and conceal unsightly articles from view. (Below) Rock from the chimney of the old home, torn down, forms an attractive mantel in Mrs. Sallie Bing's new bungalow, Free Union, Va.

IN the findings of the Federal Farm Housing Survey, rural Virginia was shocked to learn that 45 per cent of owners' homes and 61 per cent of non-owners' homes were in poor condition; that 79 per cent of the white population, and 99 per cent of the colored, carried water a distance of from 200 to 400 feet; that only 10 per cent of whites had flush toilets or bathtubs in their homes; and only about one-third of the houses were fairly adequately screened. The figures on electrified homes ran much lower, and as to interior furnishings—well, when the home demonstration agent took a look around, a drab picture was presented.

So the Department of Home Economics of the State Co-operative Extension work called into conference at Blacksburg, the Departments of Engineering and Rural Sociology. As a result, a long-time program for better rural housing was mapped out, which is showing splendid results after an intensive campaign effort started last year and continuing through 1936.

At present, the 59 county home demonstration agents, working under the direction of the State Staff of which Miss Maude E. Wallace is the Executive Head, are pushing this program.

Variety of Improvements

Forty-four counties in which home demonstration work is being done are putting on a campaign which ties in with some department of home improvement.

Accomac is stressing improved bedroom units and remodelling out-of-date clothing; Alleghany, improved storage space; Amelia and Amherst, general storage; Campbell, better food storage; Augusta, sanitation and house repair; Botetourt, kitchen improvement and style in dress; Brunswick, water in the house and sanitation.

Carroll is busy with a kitchen improvement campaign; Dinwiddie, house repairs and better furnishings; Essex and

Goochland folks say they must have more livable living rooms; Fairfax, house repair and improved housekeeping equipment; Franklin, storage and sanitation; Frederick, Greene, Highland, Louisa and Madison folks are doing all round repair jobs; Giles women are looking to better kitchen storage; Halifax is working toward water in every home and Henry County women want better storage space for foods in winter.

James City County is repairing houses and furniture; Lee County is aiming at better pantry and kitchen utensil storage; Montgomery is installing water systems; Nansemond and Norfolk Counties have on as neighborly contest, the reconditioning of house furnishings.

Much Accomplished

Nottoway, Prince Edward and Wytke are among those realizing the need for more and better storage facilities in the home; Orange combines storage spaces and sanitation; Prince William, house repairs; Pittsylvania, better food care; Rockbridge and Shenandoah are to have more convenient and cheerier kitchens; Spotsylvania is urging better home sanitation and general repairs; Tazewell women have a clothing project which will be climaxed with a fashion show.

Bedford, Chesterfield, Henrico and Powhatan are planning landscape gardening.

Roanoke has a heavy registration of contestants in a campaign for the "Elimination of Hazards in the Home."

Albemarle County is doing an outstanding piece of work under their campaign slogan "Bring the Old House Up-To-Date." One hundred and fifty women are entrants, each having selected for herself what her home most needs to bring it up-to-date and then concentrating on that need.

Much has been accomplished along sanitation lines in many counties, conspicuous among these being Prince William.

So Virginia swings back to her proud heritage, the home of country gentlemen and fine country homes, and it is the gentlewomen of Virginia who are accomplishing the job.

COTTAGE CHEESE CROQUETTES

Cottage cheese may be prepared in such a tempting manner as to produce an especially delicious way in which to serve cottage cheese is in the form of croquettes. Molding cottage cheese croquettes into the shape of carrots will add to the dish. Appropriate accompaniments are green bean or asparagus bundle or potato puree. Bacon curls make a delicious addition. Garnishes of pimentos complete this tasty dish.

This recipe, in addition to being healthful and economical, affords a splendid use for left-over mashed potatoes:

- 2 cups cottage cheese (drained)
- 2 cups mashed potatoes
- 2 eggs
- Salt and pepper to taste

Combine cottage cheese, mashed potatoes, eggs and seasonings. Form into croquettes—roll in dry crumbs, then in beaten egg and again in bread crumbs brown in deep fat (375 deg.). Garnish the croquettes with parsley tops and potato puree. Serves six.

Canning Days Are Here

DEMONSTRATION

Knowledge exchanged is cooking sense gained. Along about right now, far-seeing farm women gather together to enrich their ideas on conservation by canning. Many of grandma's old stand-bys still meet the test of taste, all right, but they're always open for new ideas.

Demonstrations such as these are the first deposits on growing accounts of pantry happiness and home thrift.

(Photo made in Pike County, Ky.)

APPLICATION

Putting ideas to work is a treasure chest of new suggestions for this home. Well she knows those ideas when unexpected when the farm garden ren of their store-house fresh food; when a broken den in canned delicacies Winter day.

PRESERVATION

"It wasn't so much work after all—now really it wasn't," you'll agree. Can't you see reflected in the shiny sides of these jars the smiles of dad and the children next Winter when you let them name their choices?

Those canned pears son always likes so well . . . those pickles dad says have just the right amount of dill . . . and how proud daughter'll be up at the State Normal when you send her that special big jar of strawberry jam she likes so well.

REPUTATION

Whether it's your own petition, the county or the big national contest, wife gets just as big a vote as her home canning with his livestock business. (Photo made in . . .)

GE CHEESE CROQUETTES

may be prepared in such a tempting manner as to provide an ideal meal delicious way in which to serve cottage cheese is in the form of croquettes. The cheese croquettes into the shape of carrots will add to the attractiveness of the accompaniments are green bean or asparagus bundles with sauce of to-curls make a delicious addition. Garnishes of pimento tips and parsley will dish.

In addition to being healthful and economical, affords a splendid means of utilizing potatoes:

1 cup cottage cheese (drained)
1 cup bread crumbs
1 egg well beaten

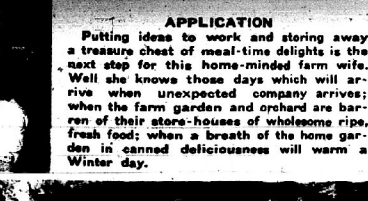

pepper to taste
cheese, mashed potatoes, eggs and seasonings. Form into carrot-shaped croquettes, then in beaten egg and again in bread crumbs. Fry until golden (375 deg.). Garnish the croquettes with parsley tops and serve with hot to-
sauce.

ing Days Are Here Again

ISTRATION

Summer Smartness

JUNE MOON SPECIAL
Pattern No. H-3163
Charming Madge Evans, Metro-Goldwyn-Mayer star, invites your approval of this latest suggestion for your smart summer wardrobe. It provides chic and comfort well within the means and ability of those of you who make your own clothes. Pattern designed for sizes 12, 14, 16, 18, and 20. Size 14 requires 2 3/4 yards of 39-inch fabric plus 3/4 yard contrast.

DAYTIME FROCK
Pattern No. H-3161
A crisp gilet with trimly tailored lines from shoulder to hem are noteworthy in this cool summer frock of dainty printed sheer. Pattern available in sizes 12, 14, 16, 18, and 20. Corresponding bust measurements 30, 32, 34, 36, and 38. Size 14 (28) requires 3 3/4 yards of 39-inch fabric plus 3/4 yard contrast.

CLEVERLY SIMPLE
Pattern No. 3008
An unusual feature of this frock is that it can be worn gracefully by so many different types of varying sizes. Pattern designed for sizes 14, 16, 18, 20, 40, and 42. Corresponding bust measurements 32, 34, 36, 38, 40, and 42. Size 16 (34) requires 4 1/2 yards of 39-inch fabric.

FASHIONABLY PRACTICAL
Pattern No. H-3162

Fashionable and gayly practical, this becoming cutout costume is fun to make and fun to wear. Whether you're a bicycle-girl, a golf enthusiast, or just a decorative kibitzer at active sports, you'll enjoy the freedom of the graceful divided skirt and the action-pleated capelet sleeves. The tuck-in blouse has an open V collar bound in tawel of a darker shade than the print as is the patch pocket placed high on one side. Pattern designed for sizes 12, 14, 16, 18, and 20. Corresponding bust measurements 30, 32, 34, 36, and 38. Size 14 (32) requires 3 3/4 yards of 36-inch fabric plus cord.

Patterns of dresses pictured above 25c. Please remit in coin or stamps. Give your name, address, pattern number and size. Mail order to Pattern Department, State Farmer Section, Scenic Bldg., Asheville, N. C. A 32-page Summer Pattern Book is available at 15c each, or, if bought in combination with pattern, 35c for pattern and book.

Farm Building Booms Over All Kentucky

College of Agriculture Distributes Thousands of Plans for Barns, Homes and Other Structures

By C. A. LEWIS

JUDGING from the number of requests for building plans being received these days at the Kentucky Agricultural Experiment Station, farmers are ready to launch one of the greatest building programs in the history of American agriculture.

Prof. J. B. Kelley, head of the agricultural engineering department, reports that since last November his mail has been almost packed with requests for plans or for information about all kinds of new buildings and equipment and about the remodeling of farm structures. For several years, the Kentucky College of Agriculture, through its extension service, has been promoting improved ventilation in tobacco curing, stressing in particular the use of ridge ventilators on barns.

Practically every new tobacco barn now being built in Kentucky has the type of ridge ventilator designed by the college, through the assistance of growers in various parts of the state.

Many New Houses

In addition, thousands of barns are being remodeled each year, the principal job in the remodeling being the construction of the ridge ventilator.

New construction and remodeling on farms throughout the state includes all kinds of buildings and equipment. New houses are beginning to appear in every section of the state. Substantial and imposing as the old mansions were built, many of them now are over 100 years old and are in a poor state of repair.

The relatively small, modern-type farm house, much as generally seen in the cornbelt, is beginning to be seen all over the state. The huge, brick or stone mansion represents another age, when construction was relatively cheap, when families were large and when labor was plentiful and wages not high.

Rigid milk ordinances in Kentucky cities, many of them rather recent in their origin, have compelled wide interest in sanitary milk equipment. The College of Agriculture designed a simple and inexpensive milk house for farmers selling whole milk. It has found wide use on many farms in the last few years.

Economical and Fireproof

The college recommends the use of asbestos-cement shingles for covering farm buildings, other than dwellings. This type of construction does away with painting, with the exception of window and door frames. The first cost is slightly more, but the saving is considerable in the life of the average farm building. The building is sheeted diagonally, the sheeting covered with felt paper, and the asbestos-cement shingles then put on. Not only is there a saving in paint, but the shingles help to make

the building fire-proof.

In the construction of new barns or the remodeling of old ones, Professor Kelley recommends the hip-roof. It costs only a little more than the gable roof and adds materially to the hay and storage space.

The Kentucky Experiment Station has designed a simple portable hog house that is finding favor on many farms. It is simple and inexpensive, provides shelter in winter and shade in summer, and can be moved about so that the hogs may be raised on clean ground free from worm infestation.

Self-feeders for chickens, hogs, sheep and other livestock are gaining in favor. The Kentucky college has plans for all kinds, and thousands have been distributed in this and other states.

Water Supply Aided

Recent dry years have brought the farm water supply to the front in much of Kentucky. Many farmers were actually without water in 1930 and sometimes in other years. In addition, many stock men have come to realize that a good supply of pure water pays. It is especially essential in dairying and helps to reduce feed bills in raising beef cattle, sheep and hogs. Thousands of water holes have been cleaned out and walled up in the last five years. Concrete and stone have been freely used in this work. On many of the better stock farms, concrete tanks are being used, thereby insuring the stock a supply of sanitary drinking water.

Professor Kelley and his assistants advise farmers and others to give careful consideration to building plans. Avoid mistakes by building from carefully prepared plans, they urge. Here are some points which they emphasize:

1. Select the building site carefully.
2. Decide on the number of persons, or animals, and the amount of feed and equipment to be housed.
3. Consider the future requirements of the structure.
4. Consult your County Agent or Home Demonstration Agent, local lumber dealers and builders regarding plans and materials.
5. Consult farmers who have similar buildings and examine them for ideas.
6. Decide upon the interior equipment to be used and obtain plans and instructions from the manufacturers for its installation.
7. Obtain or prepare the plans to be used.
8. Obtain the services of a competent builder.
9. Remember that good plans aid in determining the exact size and arrangement of the buildings and equipment, prevent expensive mistakes and save labor and building costs.

The Kentucky College of Agriculture has plans for this and other portable hog houses.

Concrete and steel improve farm water supply.

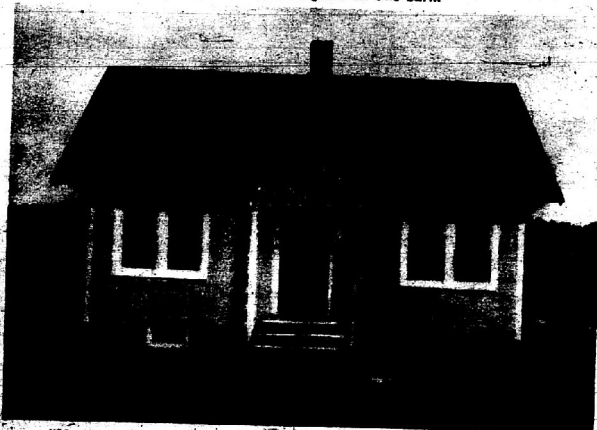

Fire-curing barn under construction.

Kentucky model milk house.

Hip-roof replaces gable on this barn.

"My New Kentucky Home" has four rooms and bath, a living room, two bedrooms, kitchen and bath. The contrast between this type of house and old, rambling farm mansions is decided.

Forests

Actual figures on growth in our forests are being prepared by the Forest Service.

In the Ohio soil and absorbent as bare soil, water not only successive rain flood control.

Agricultural Brevities

Forests

Actual figures on the value of forest growth in controlling and preventing floods are brought out in tests by the Forest Service of the Department of Agriculture.

In the Ohio Valley, forest soil is 15 to 30 per cent more porous than field soil and absorbs 50 times as much water as bare soil. Forest soils absorb more water not only in single storms, but in successive rains, an important item in flood control.

On 23 small watersheds at the headwaters of the Mississippi, the flood flow from forested watersheds for one year was only 38 cubic feet of water per second per square mile. But the flood water from grassed and abandoned agricultural lands was 432 cubic feet, more than 10 times as much.

National Forests have gained 6,176,492 acres in area through purchases approved by the National Forest Reservation Commission since July 1, 1934, the U. S. Department of Agriculture reports.

Great Britain

The number of pigs contracted for delivery to bacon curing establishments in England during 1936, under the provisions of the Pigs and Bacon Marketing Scheme, is approximately 2,000,000 head compared with 1,855,000 head in 1935. Under the 1936 contract, at least 25 per cent of the total number had to be delivered during the first four months of the year. A special bonus was paid farmers who delivered in excess of the number during this period.

According to the new basic import quota for cured pork, as announced by the British Board of Trade, the imports from non-Empire sources during the four months May-August are limited to 203,107,000 pounds.

Death

Death on the highways will be slowed down when road and traffic officials put into effect generally those regulations of proved value that have already been widely adopted. The mere lack of uniformity in traffic regulations, says Thomas H. MacDonald, Chief of the Bureau of Public Roads, is the cause of many accidents.

The National Conference on Street and Highway Safety has prepared minor vehicle codes and traffic ordinances. Thirty-nine states have adopted these proposals in part, but only a third of the states are in reasonably close agreement with the code.

Only 19 states have the standard licensing system based on a thorough examination. Not more than 20 states have a highway patrol of even reasonably adequate character.

Man can help Nature in the reproduction and growth of good timber. Finding out how to help most effectively is one of the principal jobs of the Forest Service, U. S. Department of Agriculture. Sunlight and water are vital to healthy tree growth. The diagrams illustrate three conditions common on forest lands. Where the soil moisture, young new growth does not come in and the understorey stagnates. The trees may be getting more than their share of a limited place in the sun, and defective growth of the second-growth and new-growth. The second represents an overstorey of second-growth monopolizing the light with new growth again as the victims. In the third diagram an overstorey of new growth itself is overtopping smaller new trees.

Fences

Scientific advances in the making of more durable fence will save farmers of the country millions of dollars in de-

This is how your fence looks as it comes from the weaving machine. Each single strand is as lustrous as it was before the weaving process.

(Bethlehem Steel Photo).

preciation costs, according to Prof. H. W. Riley of Cornell University. New York state at \$2,500,000 annually.

Longer life in fence means an annual saving of from \$30 to \$50 on the average 160-acre livestock farm.

Better fencing also increases farm income, according to the Department of Agriculture. The department estimates that hogs raised under sanitary conditions, made possible by adequate fencing, return their owners \$6 a head more than those kept in small dirty pens.

India

The 1935-36 cotton crop in India is now estimated at 4,793,000 bales of 478 pounds net weight from 25,138,000 acres, according to the Bureau of Agricultural Economics. This estimate is 17.9 per cent above last season. The production trend in India has been up-

ward for many years.

Indian cotton is for the most part the shortest staple in commercial use, most of the crop ranging from 3-8 to 7-8 inch. The Indian government has been endeavoring not only to increase the length of the average staple, but also to increase yields per acre.

Poultry

Thirty-four states are taking part in the National Poultry Improvement Plan, under the guidance of the United States Department of Agriculture. The department has for distribution, a tabulation showing the particular phases of the plan in which each state is participating.

Those desiring names and addresses of hatchery men and breeders taking part in the plan may obtain this information by writing to the State College of Agriculture or the State Department of Agriculture.

Germany

Adoption by Germany of a maximum agricultural sufficiency program has decreased the volume of German net imports of agricultural products by 18 per cent, and the value by 70 per cent, according to the U. S. Department of Agriculture Attache L. V. Steere in Berlin.

All large agricultural exporting countries, especially the United States have been affected by this German policy. Of the six farm products of primary importance in trade with the United States—cotton, lard, tobacco, apples, prunes and raisins, only three—cotton, prunes and raisins are not produced in Germany.

Reclamation projects now under way in Germany cover an area of approximately 3,000,000 acres. Within the next

two years it is expected that approximately 600,000 acres of this area will be available for the production of food.

This reclamation project is one of the important tasks undertaken by the government to secure the nutritive self-sufficiency of the nation. Throughout Germany, under government guidance, fertility of soil is being improved, yields are being increased by improved soil preparation and better crop rotation. The improvement in cultivation of waste land is being promoted and new land is being reclaimed from the sea.

The territory at Germany's disposal for food production is relatively small, amounting to only 111 acres per 100 inhabitants. In the United States, it is 297 acres, in Denmark and France 210 acres, and in Italy 138 acres, according to the Bureau of Agricultural Economics.

4-H Clubs

Nearly 1,000,000 farm boys and girls are now enrolled in 4-H club work, according to Dr. C. W. Warburton, director of extension, U. S. Department of Agriculture. These young people, who are studying improved methods of farming and homemaking and learning co-operation and good citizenship under the direction of the extension service, are located in all of the 48 states, and in Hawaii, Puerto Rico, and Alaska.

Club work is carried on in the United States in 2,960 counties. Extension agents are assisted in directing this work by 106,215 local volunteer club leaders.

Death On Dark Roads

Designed to protect night pedestrians, a reflector belt has been patented to cut down the tremendous death toll of persons struck by automobiles while walking on dark highways.

Studded with reflector buttons, the leather belt is worn around the arm or body. The buttons are said to catch the light from an on-coming car and reflect it back to the motorist, giving him notice of a pedestrian as far as 1,000 feet away.

Although the light may hit the button at as much as a 25 degree angle, the reflectivity is said to be equally good.

Farmers Are Listening In

WSM's 670-foot radio tower is a familiar sight to many Tennessee farmers. It is located a few hundred feet from the Nashville-Birmingham highway, seven miles from Franklin, 18 miles south of Nashville. From this structure comes the National Farm and Home Hour each week day.

At the right is pictured Harold Corder, in charge of broadcasting market reports and news for the Tennessee division of markets, as he speaks into the "micro" in his office at Nashville. WSM carries this popular farm program daily. It is estimated over a half million persons comprise Tennessee's small town and rural radio audience.

There are more than 1,000,000 radio listeners in Tennessee, in areas covered by the seven radio stations operating in daily broadcasts of farm market news.

WSM at Nashville and WMC at Memphis carry the National Farm and Home hour from 11:30 to 12:30 o'clock.

WOPI, Bristol, broadcasts a quarter hour period at 11:30 a. m., daily. When possible, G. C. Baker, county agent, presents this program.

WNOX, Knoxville, helps cover East Tennessee with a quarter hour program starting at 11:30 a. m. R. M. Murphy, Knox county agent, has been in charge of this period for almost a decade.

WDOO, Chattanooga, puts on a quarter hour program beginning at 12:30 p. m., on Wednesdays and Mondays, directed by W. J. Forbes, Hamilton county agent, and the station announcer in charge other days.

WSM, Nashville, has a quarter hour period, at 12:45 p. h., conducted by Harold Corder, assistant marketing chief, state division of markets.

WJTS, Jackson, has a quarter hour period, from 11:45 until noon.

WMC, Memphis, sponsors Tri-State Farmers' Forum, beginning at 11 a. m. A microphone connection is in the office of L. J. Kerr, Shelby county agent.

WNBR, Memphis, has farm news and markets at noon.

Farmers on Lespedeza pasture, W. H. Simmons Farms, near Adams, Tenn.

\$10,000,000 Lespedeza Crop Developed In Tennessee

AFTER little more than a decade of development, Lespedeza crops in Tennessee have reached a valuation of \$10,000,000.

Some varieties of Lespedeza were grown before the World War. And Jap clover, sometimes known as "Yankee" clover flourished for over half a century. But it was not until the early '20's a systematic movement was begun to use Lespedeza as a cover crop extensively.

Value Realized

In 1926, it is doubtful if more than 100,000 acres were in this crop. In 1929, 149,000 acres were seeded to Lespedeza. In 1935, according to J. H. McLeod, University of Tennessee economist, Lespedeza had covered 1,000,000 acres. This was divided: Hay, 450,000 acres; pastures, 350,000; seed and soil improvement purposes 200,000.

The value of this development has been realized by Tennessee farmers. It is something new for the state to raise suf-

ficient hay for its own needs and have some to spare. Four types of Lespedeza lead: Kobe, Tennessee 76, Korean and Grant Service.

Soil Holding Crop

It was before 1910 the U. S. Department of Agriculture decided to test out Lespedeza in this country and imported seed from Korea. The experiment confirmed reports of the plant which thrived so well on almost any type of soil in certain portions of Asia. The early test crops demonstrated that Lespedeza grew several inches higher than the ordinary Jap clover.

Next, seed was sent to the land grant colleges and state experiment stations. In 1921, the experiment station at Knoxville began trying out the new crop. Within two years, leading farmers began sowing small tracts with Lespedeza. It was tried as a soil holding crop with success.

Kentucky Rural Ministers Attend Second Annual Spring Short Course

THE second annual Spring short course for town and country pastors at the Kentucky College of Agriculture attracted approximately 100 rural ministers.

Mornings were devoted to rural church problems, and afternoons to rural sociology and to the work of the College of Agriculture and Agricultural Experiment Station and other agencies to promote improved economic conditions on the farm.

Lecture series were given by Dr. E. C. Cameron, in charge of courses in the rural church at Butler University, Indianapolis, and secretary of the Rural Church Commission of Indiana, and Dr. G. S. Dobbins, professor of religious education and church efficiency at the Southern Baptist Theological Seminary, Louisville. Dr. D. C. Truett of the College of the Bible, Transylvania University, Lexington, conducted devotional exercises and vesper services.

Other speakers included President

Frank L. McVey, University of Kentucky; President William J. Hutchins, Berea College; George H. Goodman, director, Kentucky Emergency Relief Administration; Dean Thomas P. Cooper, Professor George Roberts and other Kentucky College of Agriculture faculty members.

Visitors included Dr. W. H. Thompson, field secretary of the Ohio Council of Churches; Rev. Donald F. Wagoner, Winchester, O.; and Rev. Theron A. Zimmerman and Rev. Ralph A. Brandon, co-pastors of the Christian Fellowship Parish at Hamersville, Ohio.

The annual course for country pastors is a cooperative project of the Kentucky College of Agriculture and the Kentucky Rural Church Council. Dr. W. V. Cropper is president of the council, and Dr. W. D. Nicholls is head of the department of farm economics at the College of Agriculture, the department sponsoring the course. Dr. Nicholls acted as chairman.

Market Wise or Otherwise

BY E. A. JOHNSON
Kentucky College of Agriculture

THE market for farm products is passing through a critical stage.

There is more than usual interest in the lamb market because it has just recently reached a period of large sales. We recall how lamb prices rose last Summer after most of us had sold our lambs, and we wonder if it will happen again. Right now things look different from a year ago, so the market probably will be different, too.

The market for lambs started at a higher level than last year. Early lamb losses were heavier than last year throughout much of this territory. Last Summer was a period of rising prices for all meat products, partly because pork and beef production had been greatly reduced by the scarcity of feed grains, but also because consumer incomes were increasing and there was a greater demand for meat.

This year, the supply of beef is larger and the pork supply is increasing, so it looks as if lamb prices are likely to drop lower as the season advances. Many lambs have made a poor start, so it seems likely there will be more than the usual spread in favor of lambs of better quality.

There is good assurance that wool will sell for more than in 1935. Wool is in a strong position because there are fewer sheep to produce wool than in recent years, and because there is little old wool left from last year. There was a strong demand for woolen goods dur-

ing the past year, which caused woolen mills to operate at a high rate, and that is really the backbone of the present wool market.

With the prospects of even larger consumer income than in 1935, it seems reasonable that wool prices should equal those which prevailed during the first quarter of 1936.

The hog market has the greater adjustment to make, but do not assume that all the adjustment must be made in one year. The sharp rise in hog prices during 1935 came as a result of the reduction in hog slaughter brought on by a combination of factors but principally by the AAA and the shortage of feed grain as a result of the 1934 drought.

Attractive Fall Market

A gradual drop in hog prices must be expected during the next two years, as hog slaughter recovers from about one-half of the normal slaughter to, shall we say, 90 per cent of the 1932-1933 figure. The late Summer peak in prices may not, as is usual, exceed the early Spring top price for hogs. As the supply of lard is replenished it is also to be expected heavy hogs will sell at more of a discount under the 200-pound class than has prevailed during the past year. Numbers and not weight will be in greater demand.

Further adjustment in the cattle market may come, but the present level of prices may prevail for several months. The present narrow spread in prices between fat and thin cattle may not persist but will increase seasonally until next Winter and then reappear next Spring. Cattle prices will hold to a fairly high level making an attractive Fall market.

Chickens

The two big raisers in this section are to keep...

To rid the birds fluoride as a powd not dip the chicks u or three pounds an out. Dip in the n sunny day.

Chickens in June

The two big jobs for the chicken raiser in this section of the country in June are to keep the laying pullets growing.

There is a tendency to begin to neglect the hens in June, on the theory that summer eggs are not profitable. Hot weather has descended, the hens are seeking the shade, and selling good fresh eggs is more trouble. Despite these things, summer eggs can be made profitable.

Range, shade, fresh water and proper feeding are necessary in June. Continue to feed dry mash but cut down on the grain, since the latter produces too much heat for the hot weather. Supply an abundance of good water in clean vessels. Water is always essential, since the egg is largely water.

Eat More Mash

Reducing the grain part of the ration forces the birds to eat more mash. Grass, alfalfa lespedeza, clovers or some other green field should be available in which the birds can forage. They will eat much grass or legume leaves and will gather bugs.

Three dry mash mixtures are recommended by the Kentucky College of Agriculture. One is made of 200 pounds of wheat mixed feed, 100 pounds of each ground corn, tankage or meat scraps and ground oats, and five pounds of salt.

Another is made of 300 pounds of mixed wheat feed and 100 pounds each of ground corn and tankage or meat scraps and the five pounds of salt.

The third comprises 200 pounds each of the wheat feed and ground corn and 100 pounds of tankage or meat scrap and the salt.

Watch Pullets

The first two are recommended for the common breeds and the third for Leghorns. Equal parts of bran and shorts may be used in place of the mixed wheat feed.

If skimmilk is fed in abundance, the tankage or meat scrap may be reduced. If no skimmilk is used, either tankage or meat scrap must be used if good egg production is to be expected. A well-cultured flock of hens should average 17 eggs each in June.

Attention must be given by the poultry raiser to the pullets in June, if early egg production is to be had. Pullets given good care from the brooder to the laying house produce a month or two earlier than the pullets allowed to hunt for their feed.

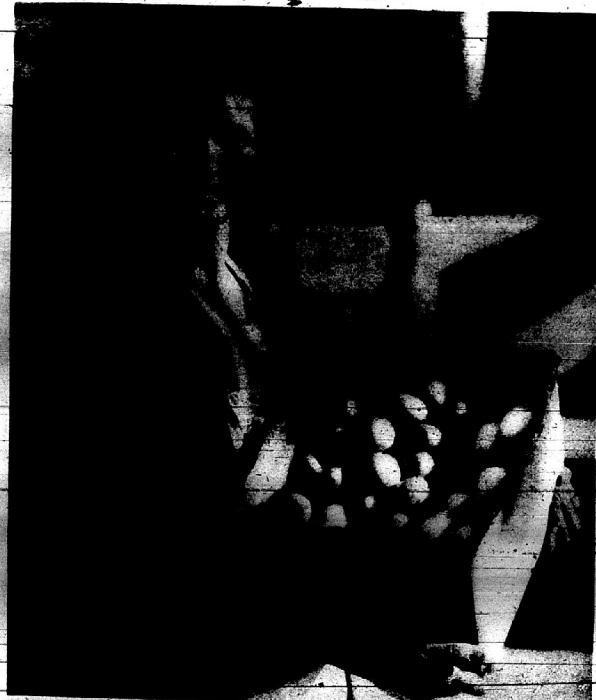

Of course, the cockerels should be separated from the pullets, and those not wanted for breeders should be fattened and sold. The pullets also should be kept away from the old birds, for best results. This is not always possible.

Hot Weather Problems

In general, the same ration can be used for growing pullets that is fed to the laying flock. Probably half grain and half mash produce best results. Shade, water and range are all important in June.

Lice, mites and disease germs are always a hot weather problem, with both hens and pullets. Keep the house and equipment clean. Scrape them clean at least once a week and spray with a solution of a pint of stock dip to three gallons of water. Paint the roost poles with crude oil or creosote, or drainings from the crankcase of an automobile or tractor.

To rid the birds of lice, use sodium fluoride as a powder or dip. But do not dip the chicks until they weigh 2½ or three pounds and are well feathered out. Dip in the morning on a warm, sunny day.

CLASSIFIED DEPARTMENT

Be a WORD—CASH—WITH—ORDER
Count each initial and whole-number as one word. Orders must be received at Asheville on or before the 10th of month preceding month of issue.

DON QUIXOTE (above) keeps Paramount starlet Virginia Weidner busy. Her pet horse is one of many showpieces in her studio backyard. (Right) Melons, corn, tomatoes—or what if you have? This curb market in McMinnville, Tenn., shows what the average county seat town can do in the way of such sales places.

REEL BATTLE. Tribesmen sweep down on the Foreign Legion in the 20th Century Fox production, "Under Two Flags." Looks real, doesn't it?

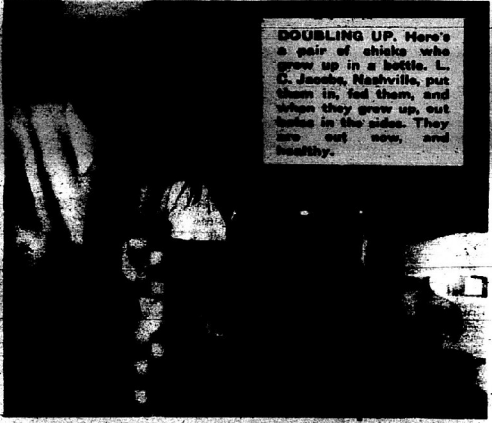

GEORGIA PEACHES. The Pickens Sisters, born on a plantation near Macon, are heard regularly on NBC programs. Like their hats?

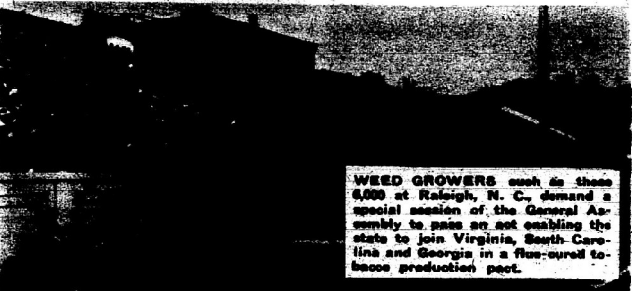

OLD MAN RIVER in miniature, rampages and all, is constructed by the U. S. Army Engineers at Vicksburg, Va., to learn vital flood control lessons. The laboratory covers 225 acres and includes an 80-acre lake. (Acme)

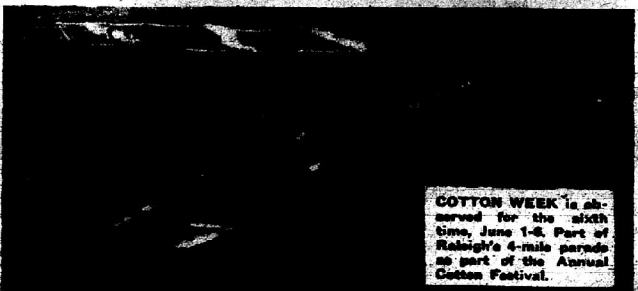

COMMEMORATING the birthplace of the Rhode Island Red breed of fowl, this monument stands at Adamsville, Rhode Island. (Wide World Photo).

DOUBLING UP. Here's a pair of chicks who grew up in a bottle. L. C. Jacobs, Nashville, put them in, fed them, and when they grew up, cut holes in the sides. They are out now, and healthy.

WEED GROWERS such as those 6,000 at Raleigh, N. C., demand a special session of the General Assembly to make an act enabling the state to join Virginia, South Carolina and Georgia in a five-cured tobacco production pact.

COTTON WEEK is observed for the sixth time, June 1-6. Part of Raleigh's 4-mile parade is part of the Annual Cotton Festival.
